How to use:

1. For sending email: copy the Email Template HTML and inline the styles (use premailer or a library). Send via your mailer (SMTP / transactional).
2. For PDF: render the PDF Template HTML with your preferred engine (dompdf, wkhtmltopdf, puppeteer). Set page size to A4 and margins. If using dompdf, avoid external webfonts; inline styles are preferred.
3. Replace placeholders with dynamic data from your server (Blade, Twig, etc.).

Next steps

Want these converted to a Laravel Blade file, a downloadable PDF generator route, or a transactional-mail-ready template? Tell me which and I will convert it.
